

aggregate conveyors

“Cross Bros. was very informative and answered every question in a timely manner.”

Robert Knudsen, Above Ground Maintenance Supervisor, American Rock Salt

American Rock Salt had two major objectives. They wanted to increase efficiency and decrease the cost of transporting salt on site.

Cross Bros. designed and installed an aggregate bulk conveyor for American Rock Salt. The conveyor moved rock salt from one building to another bag building within the mining facility at a rate of 225 tons per hour. The aggregate conveyor was lagged to the ground, and was approximately 400' long. The ground was unlevel so several adjustable feet were made for the conveyor. The conveyor discharged onto an existing stacker conveyor that emptied into a storage bin. This greatly improved efficiency and cut down the cost of loading salt into loaders for transport from one area of the site to another.

“American Rock Salt needed a conveyor priced right & trouble free without maintenance problems. Cross Bros. delivered.”

Robert Knudsen, Above Ground Maintenance Supervisor, American Rock Salt
